Directional light kits

Directional light housings in older cars usually do not have lenses and reflectors that get the most out of LED units. Therefore it can be very difficult to find usable LED units to replace incandescent bulbs. We have tested a number of LED units for directional light purposes and now offer three types that are acceptable for use in the DeLorean DMC-12. Mind that most units use forward aimed LEDs as well as sideways aimed LEDs to give a better spread of light. However the forward beam usually is the stronger and narrower of both beams.

Directional Light kits consist of

	Description
Bulbs/units	2 units 1156 / BA15S, single contact, single intensity 2 units 1157 / BA15D, dual contact, dual intensity
Illumination	All LEDs colour amber (yellow), beam 360° angle
Directional kit 03521 consists of	units – as described in bulbs/units – with 1 Luxeon LED 3W
Directional kit 03522 consists of	units – as described in bulbs/units – with 45 LEDs tower (9 fwd/36 side)
Directional kit 03523 consists of	units – as described in bulbs/units – with 28 HP LEDs tower (4 fwd/24 side)
Remarks	No installation guide needed Units replace standard incandescent bulbs of same type
Availability	yes, but limited stock

Warranty: 12 months
