RPM Relay

Over the years many mechanical RPM relays needed replacement because of internal defects. A replacement in the past years only was available as New Old Stock. Although a NOS relay never has been used, it still is old and internally the relay can bear signs of begin manufactured in the late 70s or early 80s. With nowadays modern electronic parts most of the mechanical relays have their electronic counterpart.

This new RPM relay for the DeLorean has been re-designed from the ground up and consists of SMD parts. Don't doubt for a minute when having to make a purchase decision: this new relay has proven to offer top reliability over many years of use now.

- * Newly designed circuit board
- * All SMD electronic components
- * Reliable functioning
- * Powers the fuel pump for 15 seconds after turning ignition on

The socket of the pins in this particular pin-out is no longer available. Therefore this new RPM relay only can be purchased on a core exchange basis. You have to return the old (original black) DeLorean RPM relay before getting the new RPM relay shipped to you.

! **Remark:** There are also lightgreen RPM relays in use. These however have a different footprint and can't be used for core exchanges.

Remarks Replaces the NOS RPM relay in the same socket
DeLorean ONLY product

Availability yes

Warranty: 12 months
