New and Improved Fan Relay & Fan Fail Relay

We all are familiar with the ill- and malfunctioning of the Fan Fail relay. Many have removed that relay and replaced it by the well-known three-prong wire and fuses to overcome non-functioning fans when needed. Modern times bring new solutions and this one is the best available now. Tested over many years it is the best product to finally being able to remove the three-prong wire too.

- * New designed circuit board and use of SMD techniques improve reliability
- * Reliable functioning due to absence of mechanical parts in the relay
- * Works with standard (stock) and aftermarket fans (Herveys/DMC in the USA/DMCEU)
- * Potted relay so moist has no influence on the functionality
- * Protective fan run for 20 seconds after ignition is turned off
- * No core return needed

! Purchase: although it is possible to buy these two relays separately, it is strongly advised to purchase the complete set of Fan & Fan Fail relays for improved reliability.

Order codes to use for:

Fan Relay	DCP-10031
Fan Fail Relay	DCP-10051 (with fuses)
Fan & Fan Fail relays	DCP-10071 (with fuses)

Remarks	Replaces all current Fan Fail solutions provided socket is not modified Comes with installation instructions DeLorean ONLY product
Availability	yes

Warranty: 12 months
