Window switch LED board

The original window switches in our DeLorean are 30+ years old and start to fail. Of course you could try and find original window switches, but they are hard to find. Houston now sells illuminated window switches that look very good in our car.

However the incandescent bulb used in the new DMC window switches fail too quickly.
Time to do something about it and in the process start using LED.

The main reason for exchanging incandescent bulbs for LED units are: less power consumption causing less strain on the electrical system. Another reason is overall better lifetime, so eventually LEDs are less expensive over time.

The new LED boards for the window switches are available in white, green and blue.

- * New design with SMD electronic parts
- * New design uses SMD LED (colour options, see below)
- * Low power consumption
- * No mechanical parts
- * Fits in between the switches main contacts

DCP-10311 Set with 2 switch boards, white LED

DCP-10312 Set with 2 switch boards, green LED

DCP-10313 Set with 2 switch boards, blue LED

Remarks DIY installation or send in your switches and we install the boards for you
DeLorean ONLY product

Availability TBA

Warranty: Limited Lifetime when used in existing relay sockets
