## Idle ECU Upgrade Service

Electronics have evolved enormously over the past decades since the DeLorean DMC-12 has been made. Old electronics may still be 'alive' and doing the job, but... for how long? We offer an upgrade service for the Idle ECU so it will last longer and will be more reliable for the near future.

The upgrade service is based on a core exchange – typically a winter job – for which you have to send your Idle ECU unit to us. We will replace the IC, make some modifications and test the unit before returning it to you.

- \* Microprocessor controlled idle system
- \* User-selectable settings with switches
- \* Idle speed motor turned off when engine is not running or above 1300 RPM
- \* Better range control
- \* Closed loop run until idle motor valve is fully closed
- \* Idle switch (and diode) no longer needed and could be removed if you want
- \* Contributes to better MpG
- \* Optional connection for signaling Air Conditioner use to bump up idle speed

**Remarks** Core exchange service

**Availability** Only on order

**Warranty:**
